SUMMARY

Full Stack Lead Engineer with 4+ years shipping production SaaS across fintech, health-tech, and biometric identity. Promoted to Senior Engineer within 2 years at Fedo.ai; currently leading a 4-engineer frontend team at Nexbio, owning architecture and delivery end-to-end. Brings TypeScript first depth across React, Angular, and NestJS — backed by hands-on AWS and Supabase infrastructure experience and a working knowledge of modern AI development tooling.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript, SQL, HTML5, CSS3, Angular, ReactJS, Next.js, NestJS, Express.js, Django

Cloud & DevOps: AWS (SES, SNS, S3, EC2), GCP, Docker, CI/CD (GitLab), OAuth 2.0, JWT

Databases: PostgreSQL, MongoDB, Supabase

Tools: Git, GitHub, GitLab, Webhooks, Zoho Billing

AI Developer Tools

Claude Code, Cursor, GitHub Copilot, ChatGPT, Gemini CLI,, OpenAI API, ,Anthropic Claude

PROFESSIONAL EXPERIENCE

Nexbio Research Pvt Ltd • Full Stack Lead | July 2025 – Present

- Lead a 4-engineer team building NexSAS — a biometric verification SaaS platform for enterprise-scale fingerprint, face, and iris adjudication.
- Architected the entire React frontend from zero: component system, configurable workflow engine, and RBAC module — chose a monorepo structure to maximise delivery speed for a lean early-stage team.
- Drive end-to-end feature delivery across user/team/department management, real-time notifications, integrated mail, and biometric review queues, working in lockstep with backend and biometrics engineers.
- Use Claude Code and Cursor as primary development tools, cutting routine coding overhead and keeping review cycles tight across the frontend codebase.

Recro (Deployed at Thena.ai) • Software Engineer (Contract) | April 2025 – June 2025

- Built the Slack integration for Thena's enterprise support platform — routing inbound messages from Slack, Teams, and Email into structured tickets, reducing manual triage for customer-facing teams.
- Shipped core platform features in Next.js and NestJS; leveraged Supabase and AWS for realtime data sync and secure cloud storage.

Fedo.ai • Software Engineer → Senior Software Engineer | Dec 2021 – Feb 2025 (3+ years)

- Promoted to Senior Engineer within 2 years — accelerated by sole ownership of the HSA platform and a track record of shipping without supervision.
- Built the Fedo HSA (Health Savings Account) platform end-to-end: APIs processing 1M+ financial transactions, Angular Material UI, and payment flows meeting financial compliance requirements.
- Designed an internal CRM for 50+ users in React, Angular, and NestJS — implemented RBAC, optimised bundle size and rendering performance, and reduced dashboard load time.
- Executed cloud migration to AWS (SES, SNS) and Supabase across multiple Fedo products, standardising infrastructure and consolidating identity management.
- Designed and shipped a multi-gateway subscription billing system with automated reconciliation, eliminating a recurring manual finance ops bottleneck.
- Engineered reusable UI components and data processing optimisations for Fedo Vitals, an Alpowered health scan product processing real-time computer vision data.
- Grew 2 junior engineers through structured code reviews and weekly 1:1s — both secured stronger roles within 18 months.

EDUCATION

P.A College of Engineering, Mangalore, Karnataka

Bachelor of Engineering – Computer Science & Engineering | May 2015 – May 2020
